The long pending issue of shifting of high voltage electrical cables on the Lemon Tree hotel side of Raidurg metro station is resolved today in a joint inspection of HMRL MD Mr NVS Reddy along with senior officers of TSTransco, Tsspdcl & other organisations concerned. Due to presence of thirty eight 11 Kv & 33 Kv electrical cables haphazardly laid in shallow depths, sewer lines, storm water pipes etc., below the narrow footpath strip on Lemon Tree side, the fourth Entry/Exit of Raidurg metro station could not be constructed and even the footpath could not be laid earlier.

Amicably resolving all the contentious & safety issues, HMRL MD advised L&T to change the foundation design of the escalator, elevator & staircase of the Metro entry/exit near Lemon Tree hotel; & Transco to share some of the space it recently dug to lay its 132 Kv cables for accommodating some of the Discom electrical cables. He also instructed HMRL & L&T engineers to quickly construct a special trough to safely enclose the remaining cables of Tsspdcl. He has also directed them to complete the cable shifting works with proper coordination among all the details organisations by the 10th of this month, so as to take up the footpath & entry/exit works thereafter.

Tsspdcl Directors Mr J Srinivas Reddy & Mr T.Srinivas; HMRL Chief Electrical Engineer Mr DVS Raju & Chief Project Manager Mr Anand Mohan; Transco CE Mrs Lata Vinod, L&T Metro Project Director Mr MP Naidu & other senior officers participated in the inspection.
